

# CapeVerse

Complete Player and Owner Handbook

CapeVerse is a Telegram superhero collection RPG built around owner-published original worlds, strategic teams, PvE, Arena, Rift encounters, relics, and boss events.

## 1 · Account and identity

Use /start to create or reopen your account. CapeVerse displays your Telegram first name and uses your numeric Telegram ID as the permanent account identity. Usernames are not required and can change without affecting progress.

Choose Enhanced, Tech, or Mystic as your Origin. The choice grants a permanent passive. If the owner has published a starter for that Origin, the hero is granted and placed in Team 1 automatically.

## 2 · Main commands

/start → create or reopen an account  
/main → open the main game menu  
/menu → open the main game menu  
/profile → generate a visual profile card  
/guide → open the interactive guide center  
/help → return to the main menu

## 3 · Currencies

**Cape Credits** pay for relic forging and progression. **Signal Shards** activate Recruitment Beacon pulls. **Prism Cores** are reserved for premium and special-event systems. **Patrol Intel** starts Case Files and mission choices. Every balance change is written to the economy ledger.

**Signal Boost** rises after ordinary recruitment results. When it reaches its threshold, the next pull is guaranteed to use the high-rarity pool and the meter resets.

## 4 · Heroes, universes, and places

Every hero has a name, codename, source, rights status, universe, place, faction, role, rarity, alignment, image, story, and three combat moves. Universes separate realities; places identify cities, districts, planets, or realms inside those realities.

The owner creates all heroes. There are no hardcoded starter heroes. A hero can be marked as the Enhanced, Tech, or Mystic starter during guided creation.

## 5 · Teams and synergy

Team 1 supports up to three owned heroes. The first active member performs the current battle actions. Universe variety contributes to the displayed synergy value. Future team editing can expand this into mode-specific squads.

## 6 · Recruitment Beacon

One pull costs one Signal Shard. Published heroes form the recruitment pool. Duplicate pulls increase the owned hero's star count. The Beacon displays the remaining Shards and current Signal Boost after every pull.

## 7 • Battle rules

Each hero has a Signature move, Utility move, and Ultimate with owner-defined damage. Utility attacks reduce the incoming counterattack. A Nemesis Ultimate appears only when the active hero is linked to the current villain. Damage and rewards are calculated by the server.

Battle screens show both names, ten-segment HP bars, exact current and maximum HP, turn number, the latest move result, and available move buttons. Victory rewards are granted immediately and recorded in the ledger.

## 8 • PvE, Arena, and Rift

**Normal enemies** power repeatable street operations. **Villains** power stronger hunts and Rift encounters. **Arena** uses another registered player's identity as the opposing captain. **Rift** victories grant higher rewards and increase the player's floor.

## 9 • Missions and alignment

Patrols grant quick Cape Credits. Case Files consume Patrol Intel and offer choices such as protecting civilians or pursuing a threat. These choices update the player's Hero or Vigilante alignment and grant configured rewards.

## 10 • Relics

Forging costs 100 Cape Credits. A relic has a slot, rarity, set name, base stat, substat, level, and equipped state. Relics remain in the player's permanent inventory.

## 11 • Events

An event requires a published villain or event boss. The owner links that boss to an event and sets its description and Cape Credit reward. Players can then enter the boss battle from Events.

## 12 • Owner and moderator commands

/owner → owner control panel  
/addmod → add a moderator by replying to a user or using a numeric ID  
/pending → review submissions  
/submithero → guided hero creation  
/submitvillain → guided enemy creation  
/submitevent → event submission  
/test → deterministic PvE simulation  
/cancel → cancel an active creation wizard  
/adminhelp → owner and moderator instructions

## 13 • Guided content creation

The hero and villain wizards ask one question at a time. Button choices are used for source, rights, role, rarity, alignment, enemy type, and starter status. Text steps collect names, universe, place, faction, story, abilities, damage, HP, attack, and Nemesis links. Draft state is stored in MongoDB and can resume after a restart.

For artwork, upload an image through @vTelegraphBot and provide the resulting <https://telegra.ph/> or <https://graph.org/> URL. CapeVerse validates the URL and stores it with the content. If Telegram cannot preview the image, the text draft still remains available.

## 14 · Approval and rights

Draft → preview → submit → owner review → publish. Content marked unverified cannot be approved. Original content should use new names, costumes, symbols, silhouettes, stories, and visual identities. Do not use protected Marvel, DC, X-Men, actor, logo, or exact-costume material without documented rights.

## 15 · Owner testing and logs

/test runs a deterministic simulation using the first published hero and first available normal enemy or villain. It changes no player balance, reward, battle record, or rating. Important user, content, approval, moderator, test, character, and battle events are sent to the owner and configured audit chat.

## 16 · Fair play

Do not share account access or attempt to alter callbacks. Battles, currencies, rewards, and ownership are server-controlled. Report broken content to the owner before continuing an affected encounter.
